EDUCATION

B.S., Mathematical Sciences, Discrete Math and Logic Concentration

Graduated May 2024

Carnegie Mellon University, Pittsburgh, PA

Minor in Game Design

Relevant coursework: Computer Game Programming, Computer Graphics, Intro to Computer Systems, Linear Algebra, Data Structures and Algorithms, Principals of Functional Programming, Advanced Game Studio

TECHNICAL SKILLS

Programming: C, C++, C#, Java, Python; OpenGL, Vulkan **Game Engines:** Unity, Unreal, Godot

Mathematics: Discrete Math, Linear Algebra, Multidimensional Calculus

Additional Experience: 3D Modeling (Blender), Web Dev (HTML, CSS), Video Editing (Davinci Resolve)

WORK EXPERIENCE

Mixed Reality Research Assistant

June 2023 - December 2023

Embodied Computations Lab, Carnegie Mellon School of Design

- Developed custom application for in situ welding training and guidance in Unity, C# for use with Meta Quest Pro, Quest 3
- Collaborated with Design graduate students to design and construct custom welding helmets with VR headset mounts
- Wrote custom shaders to integrate UI assets for overlay visuals, enabling fast iteration on designs via parameters
- Integrated Java plugin to collect additional sensor data through headset USB-C port
- Conducted workshops with on-site demos for local industrial design students, incorporating feedback in new iterations

PROJECT EXPERIENCE

C++ Programmer, Graphics Programmer (OpenGL), Game Designer

Fall 2023

CMU 15-466 Computer Game Programming

- Created 6 small games in 6 weeks, and 1 large game in 2 months, programming gameplay, graphics using C++, OpenGL
- Developed custom asset pipelines, Blender add-ons in Python, facilitating level iteration and scripting for interactables
- Programmed custom 3D physics engine supporting sphere and box collisions in mini-golf game
- Designed and implemented custom recursive stencil buffer-based portal system for non-Euclidean puzzle game

Unity Game Programmer, Game Designer

June 2023 - March 2024

Independent Work

- Created unique camera-based puzzle game for Ludum Dare 54, placing 72nd overall, 16th in innovation category (solo)
- Collaborated with 10+ teammates in-person and online to develop first person puzzle narrative game for GMTK Jam 2023
- Expanded on previous dialogue and progression system, adding support for voice clips, subtitles, and character portraits
- Co-designed mixed reality experience for Quest 3 with fellow student for independent study; programmed FPS mechanics

3D Graphics Engineer

Spring 2023, Spring 2024

CMU 15-462, 15-472 Computer Graphics

- Implemented algorithms in rasterization and raytracing pipelines in CMU's educational graphics package using C++
- Programmed mesh editing algorithms, and skeletal animations via forward and inverse kinematics
- Prototyped Vulkan scene viewer in C++ using custom vector math library and Win32 API for new real-time graphics course

Unreal Game Developer, Lead Programmer

August 2022 - March 2024

CMU Game Creation Society

- Developed linear first-person shooter game using Unreal Engine, Blueprints and C++
- Programmed full and semi-automatic hitscan weapons, with animations for firing and reloading
- Designed and programmed enemy AI for detecting player, moving, and firing weapons
- Led team of 15 students to develop online multiplayer third-person horde shooter, teaching Unreal to new programmers

Android AR Software Developer

Spring 2023

CMU 53-472 Advanced Game Studio

- Developed "Cyber Sleuth", a geospatial AR game for Android with Niantic's Lightship ARDK using Unity and C#
- Utilized Lightship Visual Positioning System to place characters and objects in real-world locations at CMU
- Prototyped flexible dialogue system and tool for designers to place story and background objects via AR app
